An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

In claim 1, on lines 9-10, "image sensing device" has been changed to "photosensitive cells".

The following is an examiner's statement of reasons for allowance: The prior art fails to teach an image signal processing method using a plurality of photosensitive cells, among other features, comprising the steps of obtaining, when the image data are bidimensionally arranged such that green of the image data appears in a square lattice pattern, red pixel data from the real pixels facing each other in one diagonal direction at both sides of green, and obtaining blue pixel data from the real pixels facing each other in the other diagonal direction at both sides of green; generating, when either one of a red real pixel and a blue real pixel is a subject pixel to be dealt with, pixel data of a complementary color complementary to green by using a plurality of pixel data surrounding the subject pixel and positioned in a direction of correlation, while making a decision for improving correlation accuracy; generating pixel data to be interpolated in a virtual pixel from pixel data of a same color facing each other in at least one of a horizontal direction and a vertical direction by using pixel data of the complementary

color and the green pixel data; and limiting a frequency band in a direction perpendicular to a direction used for interpolation.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

I) Suzuki 6,469,290 discloses an image signal processing method comprising luminance data and chrominance data.
